PROFILE SUMMARY

Self-taught **Full Stack Developer** with hands-on experience building scalable, production-ready web applications from frontend to backend. Proficient in **React**, **Next.js**, **Node.js**, **TypeScript**, and **MongoDB**, with strong exposure to clean architecture, RESTful API design, authentication flows, real-time systems, and payment integrations. Experienced in deploying cloud-native applications on **AWS** using Docker. Solid foundation in **Data Structures** and end-to-end system design.

SKILLS

Languages	JavaScript, TypeScript
Frontend	React, Next.js, Tailwind CSS, Bootstrap, Zustand, Redux Toolkit
Backend	Node.js, Express.js, NestJS, REST APIs, JWT, Multer
Databases & Storage	MongoDB, SQL, Cloudinary, AWS S3
Database Concepts	Indexing, Aggregation Pipelines, Transactions, Schema Design
API & Security	RESTful Design, RBAC, Access & Refresh Tokens, Webhooks
Integrations & Real-Time	Socket.IO, Razorpay, Stripe, Google OAuth, Facebook OAuth
Cloud & DevOps	AWS EC2, NGINX, Docker, GitHub Actions, Render, Vercel
Testing	Unit Testing (Jest), API Testing (Postman)
Core Concepts	Authentication Flows, Pagination, Rate Limiting, Caching Basics
Architecture	Clean Architecture, Repository Pattern, MVC, SOLID, OOP
Version Control	Git, GitHub

PROJECTS

ByWay — Learning Platform

[Live](#) — [GitHub](#)

A multi-role e-learning platform enabling students to purchase courses, learn through interactive content, apply as tutors, and earn certificates upon completion.

- Built using Next.js and TypeScript with clean, modular architecture.
- Implemented role-based access and structured tutor onboarding workflows.
- OAuth authentication using Google and Facebook.
- Stripe payment integration with webhook-based validation.
- Real-time chat and notifications using Socket.IO.
- Dockerized services with CI/CD pipelines for deployment.

Mobilify — E-Commerce Platform

[Live](#) — [GitHub](#)

An end-to-end e-commerce system with secure checkout, wallet support, and automated inventory and order workflows.

- React frontend using Redux Toolkit and RTK Query for optimized state management.
- Backend built with Node.js, Express, and MongoDB following MVC architecture.
- Integrated Razorpay for payments, refunds, and wallet transactions.
- Implemented real-time stock and order updates with scalable deployment on AWS.

MINI PROJECTS

LinkUp — Real-Time Chat Application

[GitHub](#)

A real-time one-to-one chat platform with instant message delivery and live status updates. Built using React, Express,

MongoDB, and Socket.IO, featuring dynamic theming, real-time UI updates, and an event-driven architecture.

Wholesale Delivery Management System

[GitHub](#)

A logistics management system for wholesalers, vendors, inventory, and delivery orders. Built using NestJS, REST API, and MongoDB (Mongoose) with clean modular architecture, JWT-based authentication, and role-based access for Admin and Truck Driver. Supports secure CRUD operations, validation, password hashing, and scalable workflows.

Aadhaar OCR Extraction System

[GitHub](#)

An OCR-based document processing service that validates Aadhaar images and extracts user details accurately using Node.js, Express, Tesseract OCR, and MongoDB, with optimized preprocessing and secure data handling.

Student Management System

[GitHub](#)

A student record and attendance management system built using Express, HBS, and MongoDB. Includes Google OAuth authentication, admin-side CRUD operations, and a clean MVC-based application structure.

EDUCATION

Brocamp (Brototype) — MERN Stack Development

[Certificate](#)

2024 – Present

Bachelor of Computer Applications (BCA)

University of Calicut, Kerala

2021 – 2024
